ART UNIT

PAPER NUMBER

3736

DATE MAILED: 06/16/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	09/938,533		MULLER ET AL.	
	Examiner		Art Unit	
	Jonathan ML Foreman		3736	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 3/29/06.
- 2a) ☐ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 and 11-39 is/are pending in the application.
- 4a) Of the above claim(s) 8,9,12 - 18 and 20 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7,11,19 and 21-39 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

New grounds of rejection are contained within this Office Action. Accordingly this action has been made Non-Final.

Specification

The amendments to the specification filed September 8, 2003 have been entered.

Claim Rejections - 35 USC § 102/35 USC § 103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 – 7, 11, 19, and 21 – 39 are rejected under 35 U.S.C. 102(b) as anticipated by U.S. Patent No. 5,788,711 to Lehner et al. or, in the alternative, under 35 U.S.C. 103(a) as obvious over U.S. Patent No. 5,788,711 to Lehner et al. in view of U.S. Patent No. 6,517,476 to Bedoya et al.

In reference to claims 1 – 7, 11, 19, and 21 – 39, Lehner et al. discloses providing a partially implantable hearing system (Figure 1) comprising an electromechanical output transducer (6) selected from the group consisting of electromagnetic, electrodynamic, magnetostrictive, dielectric and piezoelectric transducers (Col. 8, lines 21 - 38); a micromanipulator (1) attached to a cranial vault (Col. 6, lines 24 – 26) for rotationally and axially positioning the transducer and for fixing the

Art Unit: 3736

transducer in a set position (Col. 6, lines 41 - 53); a releasable coupling unit disposed between the transducer and the micromanipulator (Col. 7, lines 26 - 31). The releasable coupling comprises a transducer-side coupling element (15) and a micromanipulator-side coupling element (14) being adapted to selectively engage each other and disengage from each other. The micromanipulator-side coupling element receives the transducer-side coupling element and is axially symmetrical with respect to an axis of the transducer (Figure 3). At least one of the coupling elements is partially made of an elastic, soft polymeric material (Col 7, line 29). The releasable coupling unit enables the replacement of the transducer while maintaining the position set by the micromanipulator. Lehner et al. discloses a releasable coupling unit where the micromanipulator-side coupling element defines a rigid annular receiver and the transducer-side coupling element is at least partially elastic (Col. 7, lines 26 - 31). The Examiner considers the releasable coupling to be a snap-in coupling in that the transducer can be snapped into and removed from the coupling. However, if Lehner et al. fails to disclose the releasable coupling being a snap-in coupling. Bedoya et al. discloses a connector for an implanted hearing system (See Abstract) wherein the releasable coupling is a snap-in coupling having a rigid annular receiving member, and the coupling element is a soft polymeric material (Col. 2. line 40) and adapted to snap into the rigid annular receiver member in a substantially axial direction (Figure 3; Col. 7, lines 1 - 5; Col. 8, lines 56 - 63). It would have been obvious to modify the releasable coupling unit as disclosed by Lehner et al. to include a snap-in configuration as taught by Bedoya et al. in order to provide a coupling unit which provides a tight, snug fit between components and facilitate in situ selective interconnection between the micromanipulator and the transducer and allow for selective removal/repositioning of the transducer (See Abstract).

Response to Arguments

4. Applicant's arguments filed 3/29/06 have been fully considered but they are not persuasive..

Art Unit: 3736

Applicant asserts that one having ordinary skill in the art would not be motivated to modify the releasable coupling unit as disclosed by Lehner et al. with the snap-in coupling as taught by Bedova et al. because Lehner et al. already discloses a way to provide selective interconnection between the transducer and the micromanipulator. However, the Examiner disagrees. The coupling unit as disclosed by Bedova et al. provides for a snug connection between components (Col. 6, lines 65 – 67) and a connection which would facilitate in situ selective interconnection between the micromanipulator and the transducer and allow for selective removal/repositioning of the transducer. Bedova et al. discloses using the coupling member with middle ear actuators (Col. 4, line 15). The Examiner maintains that one having ordinary skill in the art would see the benefit of modifying the coupling element as disclosed by Lehner et al. to incorporate the features of the coupling member as taught by Bedova et al.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan ML Foreman whose telephone number is (571)272-4724. The examiner can normally be reached on Monday - Friday 8:00 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Max Hindenburg can be reached on (571)272-4726. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
